

August 4, 1986

Mr. Roy Worthen
MORGAN CITY CORPORATION
Morgan, Utah 84050

Dear Mr. Worthen:

It has come to our attention that the city is using pumps in the Weber River to divert water for irrigation uses within the city. These rights are allegedly covered by stock in Echo Reservoir and by shares in a canal company that are being used from the pumps instead of being used from the canal.

It is important for the Weber River Commissioner to be aware of and monitor the amounts of water that are being used within the Weber River Drainage. We would, therefore, request that you identify the amounts and rights of water that are being used from the pumps and that a measuring device be installed on the pumps to adequately measure the amount of water obtained. The measuring device should be available for inspection by the river commissioner at all reasonable times as may be required in recording and monitoring the water pumped.

The information should be supplied to our office and the measuring devices installed within 30 days of this notice. Should you have any questions, please contact Mr. Kent L. Jones of our Distribution Section in Salt Lake.

Respectfully,

G. Blake Wahlen, Hydrologic Engineer
for Kent L. Jones, P. E.
Directing Engineer, Distribution

cc: E. Blaine Johnson, Commissioner
Jesse B. Anderson, P. E., Weber Area Engineer
